

eWiSACWIS 3.4 Pre-Release Highlights

January 12th 2009

Assessment

- (25090) When inserting a new Allegation on the Allegation tab of the Initial Assessment, a row is automatically added to the Maltreater(s) groupbox. Therefore, each Allegation must have at least one maltreater associated with it.

Document Plans

- (22070) A new Independent Living page was added to eWiSACWIS in order to better track youth whom are eligible for services. This functionality will affect the primary worker of the case as well as Independent Living Coordinators who are county employees or contracted employees. The page will house some basic demographic information as well as record the documents obtained for a youth (IE birth certificate, social security card, etc.). The new page will also be where the user will document the date an IL assessment was created for a youth, the tools used in assessing the youth, the date a IL transition plan was created for a youth, as well as the anticipated age and living situation of the youth when aging out of care. The page can also be used to record and report on IL services provided for a youth including the service category, the person responsible for providing the service, the dates of the service, the goal of the service and any additional comments regarding the IL service being provided. The page will be accessed via Maintain> Independent Living. The youth must be searched out and upon save, a record will be created for the youth. This record will remain with the youth even after the youth's case is closed. There are two ticklers associated with this enhancement: IL Assessment Due and IL Transition Plan Due. Both will be due 90 days after the youth turns fifteen and has been in care for six months. The Independent Living tab on the Permanency Plan will no longer exist, but instead will be two system derived fields on the Basic tab of the Permanency Plan. These fields are: The youth is eligible for IL services (yes or no), and the date the youth became eligible.
- (25033) When using the Copy hyperlink, the Review of the Permanency Plan template was pre-filling the previous worker of the permanency plan review/hearing. The template has been fixed to show the name of the current worker creating the template in the "Name of Worker" section and not the previous user when using the copy hyperlink.

Eligibility

- (25290)The system correctly inserts the End Date to a IV-E eligibility redetermination record when the child's discharge from placement is documented in the system. The system will no longer insert an End Date in all redetermination rows.

File Cabinet

- (24834) The process for scanned documents being uploaded to eWiSACWIS has been modified. This modification is expected to correct the errors users see when a scanned image does not load properly into eWiSACWIS.

eWiSACWIS 3.4 Pre-Release Highlights

January 12th 2009

Issue/Reconcile Checks

- (23926) A new maintenance page has been created to assist financial users in processing and working with payment and check data. The new page will allow fiscal workers to commit a single action on multiple pieces of work. The page also removes the need for assignments to Providers or Cases in order to complete these actions.

Along with the addition of this new page, attention was given to the display of payment and check data under both Case and Provider. The goal was to synchronize the display of these pieces of work so that they were consistent across all views.

Please see the webcast for more in-depth information about this change.

Legal Consult

- (21908) For Pre-Adoptive cases, the most recent legal status recorded for the case participant prior to TPR will now display correctly in the Pre-Adoptive Child case and search outliners.

Mobile Computing

- (20356) When checking out cases to eWiSACWIS Anywhere by tablet or laptop, the time it takes to check out has been significantly improved. This performance increase was completed by limiting the number of case notes being checked out to the past 32 days (based on the date the note was created) and by limiting all other case work being checked out to be the same as what is viewed on the desktop when Date Restricted is checked.

Print Case

- (47) This enhancement will benefit all workers who need to output work from eWiSACWIS. The Print Case Record allows the user to view and print both case level documents and case participant documents. Print Case Record is accessed via the Actions hyperlink next to a case on the desktop or in search. The user can select the documents that he/she wishes to have processed into one concatenated document based on the user entered date range and selected participants. This will benefit users who need to print multiple pieces of work that have been completed in eWiSACWIS.

Standard Program Services

- (25055) A new target group = RPG - Western Region has been added to the Standard Program Services page. Three new SP Categories: AODA Assessment, AODA Treatment, and Substance Use Screen have also been added. These 3 categories will display when RPG - Western Region is selected as the target group.
