How to Remotely Connect to DCFVDI on iPad (Windows 10)

1. Double-click the icon you normally use to connect to your VDI.

2. This step is only done the first time:
   a. Tap on Servers
3. Tap on New.

5. This step is your standard Vasco Two-Factor login. Enter your Username and Passcode just like you normally would, except enter your ACCOUNTS domain username instead of your DCFINT domain username.

6. Enter your DCFINT domain credentials.
7. Tap on your VDI.

8. You will now have two VDI options to select from. You can remove the original one that is labeled “vdi.dcf.wisconsin.gov.”
