How to Mirror PC Screen on Roku

Description:

This is a guide for mirroring your PC Screen through Roku so that it can be used as a secondary monitor.
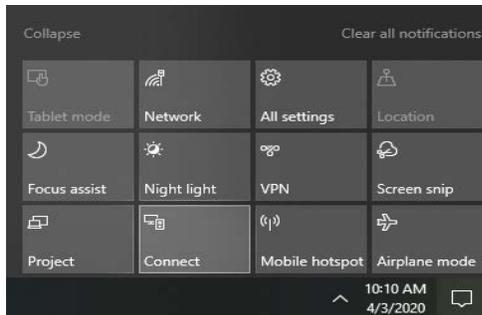

Things to note:

- This feature can only be used with Windows 10 and Windows 8.1
- This feature can be used with most current Roku standard devices. Roku Express units Roku Express 3900 and Roku Express +3910 models and later support mirroring. For more information on version specifications look here: https://www.roku.com/products/compare
- Your Roku needs to be running Roku OS version 7.7. This information can be found by going to the settings screen on your Roku then System > About. To update the OS go to Settings > System > System Update > Check Now
- You need to have a wireless network connection on your PC

Mirroring Setup

Make sure to turn on your TV and select the input your Firestick is plugged into.

For Windows 10:

Open the action center by clicking on the lower right icon and select connect:

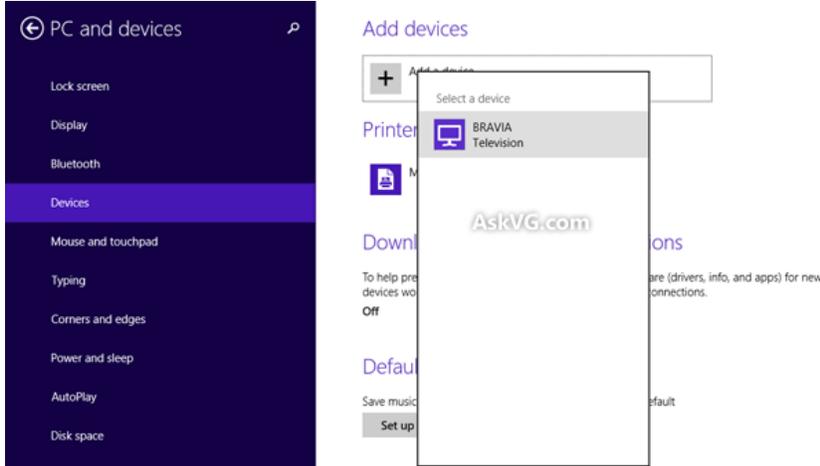

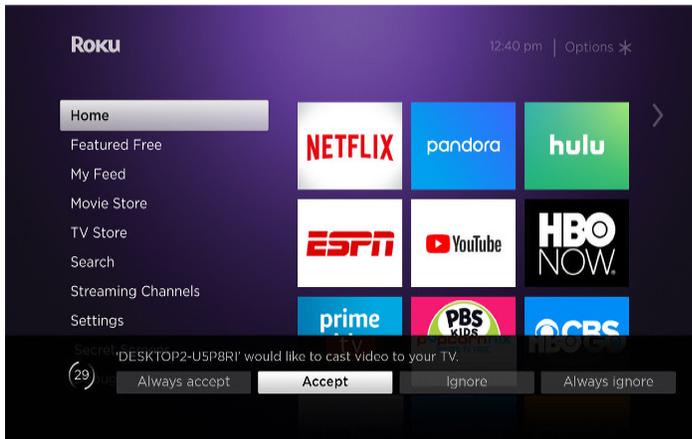

Select your Roku device:

For Windows 8.1:

Point the mouse cursor to the lower-right corner of the screen, move the mouse pointer up, and then click **Devices.**

Tap or click **Project**, and then select your Roku device.

Select Accept on the Roku device:

Windows 10: The top of your PC screen will show that you are connected. Select disconnect when you are done mirroring the display.

Windows 8.1: Point the mouse cursor at the lower-right corner of the screen, move the mouse pointer up, and then click **Devices**.

Select **Project**, and then select **Disconnect**.
