## Updating VMware Horizon Client on personal Windows and Mac devices.

If you are connecting to your VDI using your own device, you'll need to make sure you have version 8.2 or higher of VMware Horizon Client in order to get the "fully optimized experience" with Teams.

To check what version you have, click on the arrow pointing downward in the upper right corner of the VMware Horizon Client and select "About VMware Horizon Client."

On Windows it will look similar to this:

On Mac, the menu will look similar to this:

If the build is 8.2 or higher, you have the right version.

On Windows the "about" window will look similar to this:

About VMw	are Horizon Cli	ient	Х	
	Product Inform	nation		
-	Product:	VMware Horizon Client		
	Version:	2103		
	Build:	8.2.0 (17759012)

If the build number is less than 8.2, you will need to update it. To do so you will need to download the update directly from the VMware website

https://my.vmware.com/en/web/vmware/downloads/info/slug/desktop\_end\_user\_computing /vmware\_horizon\_clients/horizon\_8

**Note:** Clicking on "Software Updates" or "Check for Updates" in the same menu you clicked on "About VMware Horizon Client" in, will not update you to version 8 from a lesser major version. Clicking that button will only upgrade the minor version (i.e. from 5.2 to 5.3).

Do not download the VMware Horizon Client from the Windows Store. The version from the Windows Store may not be the correct version.
