The Department of Children and Families is an equal opportunity employer and service provider. If you have a disability and need to access services, receive information in an alternate format, or need information translated to another language, please call the Division of Safety and Permanence at (608) 266-8787. Individuals who are deaf, hard of hearing, deaf-blind or speech disabled can use the free Wisconsin Relay Service (WRS) – 711 to contact the department.

About the Wisconsin Out-of-Home Care (OHC) Report

Additional Resources: For more information on current placements and placements at time of entry and exit, see the Wisconsin OHC Dashboard.

The Out-of-Home Care (OHC) Report provides an overview of children placed in OHC throughout the 2022 calendar year. This year's report is reflective of changes compared to the prior report to better represent the current landscape and trajectory experienced by children and youth while they are in Wisconsin's out-of-home care system.

The OHC Report provides information on children in OHC placements during calendar year (CY) 2022 and on December 31, 2022. This report includes information on demographics, trends in the OHC system, placement data, and outcomes data (stability, discharges, length of stay, etc.). Counts presented in this report may differ from other published information depending on data maturity, the scrape of data utilized, or the source.

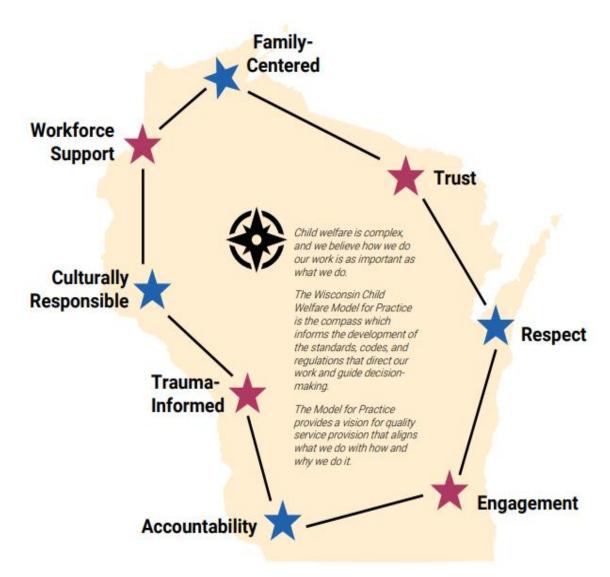

Wisconsin remains committed to continued strides in putting families first and reducing racial disproportionality throughout the system. Between 2018 and 2022, Wisconsin removed 4 fewer children per day and decreased the overall proportion of children served in OHC in that period of time by 28%.

The Department of Children and Families (DCF) thanks individuals with lived experience, local child welfare agencies, service providers, and placement providers for ensuring that all children are safe and loved members of thriving families and communities.

Wisconsin Child Welfare Model for Practice

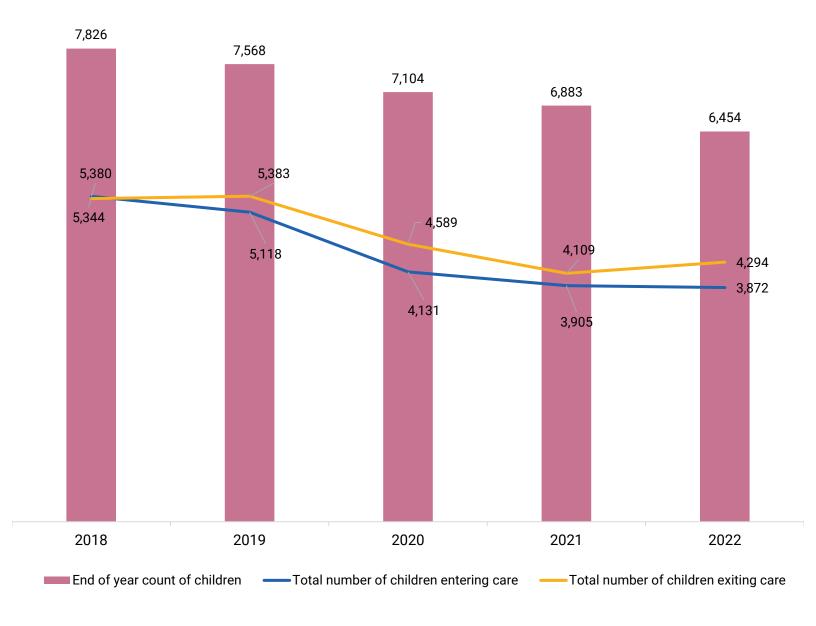

Putting Families First

Wisconsin child welfare services help children thrive in safe environments and empower families to provide safe, permanent, and nurturing homes for their children. Local communities and their child welfare agencies and families, with the support and guidance from federal and state partners, do this by supporting children and youth in their own homes, families, tribes, and communities whenever possible. With a focus on family and community, we will engage with children, youth, and families to expand healthy connections in their communities and tribes and to bolster resiliency in families to help them thrive.

Wisconsin's OHC Landscape

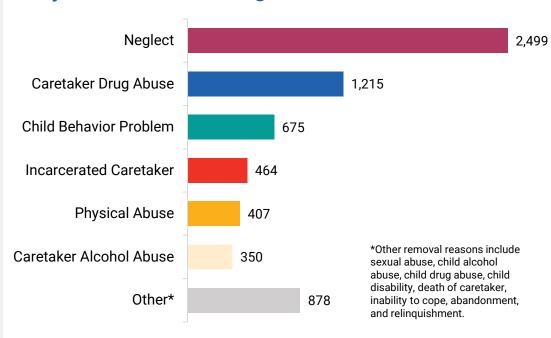

A total of **10,452** children were served in OHC in 2022. As the number of children served in OHC declines each year, there has been a **18%** reduction compared to a system peak in 2018. In this same time frame, Wisconsin has seen a **28%** decrease in children entering OHC. If Wisconsin continues this trend, the state should continue to see fewer children in OHC in the future.

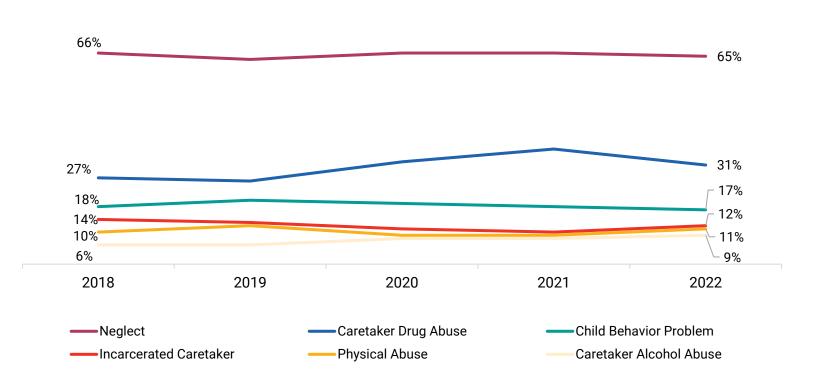

Who is entering OHC?

Over the last decade, neglect has continued to be the primary identified reason for removal. While the number of children entering OHC due to neglect is decreasing, it remains the most prevalent reason for children entering OHC, with nearly 65% of children having at least one removal reason identified as neglect.

Why are children entering into OHC?

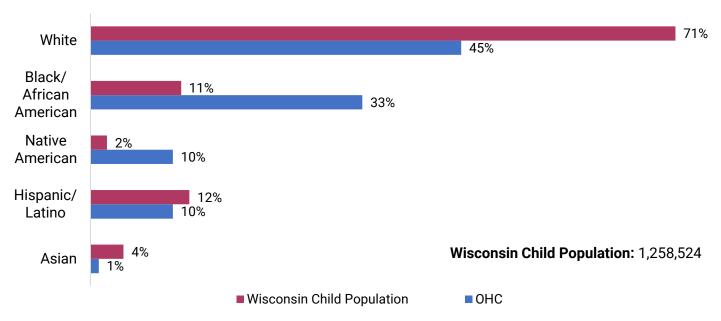

Trends of the top six removal reason rates of the past 5 years

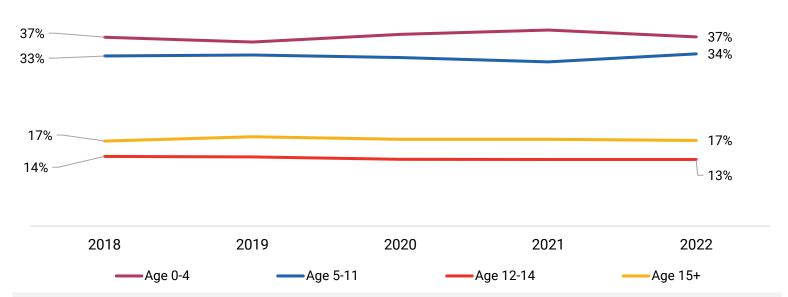

Who is in OHC?

Race and ethnicity of children in OHC compared with general population*^

Ages of children in OHC over the past 5 years

The data on this page are a count of 6,454 children residing in OHC on 12/31/2022.

The majority (71%) of children served in OHC were aged 0-11 years old. The proportions of age groups has remained constant over the past five years, even as the number of children in OHC decreased.

[^]The Wisconsin Child Population is as of 2020 from the Office of Juvenile Justice Easy Access Population Profile.

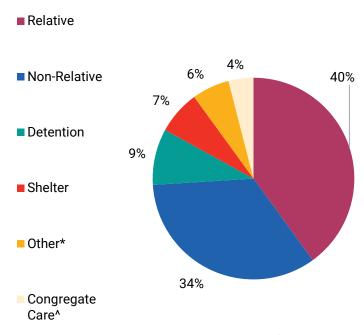

^{*}Count of Native Hawaiian/Pacific Islander and Unknown children are not shown as they make up 0% (3) and 2% (105), respectively, of children in OHC.

Initial Placement Impacts Child's Experience in OHC

In 2022, 60% of children in Wisconsin were not placed with a relative when they first entered OHC. Children's initial placement matters as exposure to the child welfare system inflicts lasting trauma. If OHC is necessary, children should be placed with a relative, and only when that is not an option, should the next least restrictive setting be considered.

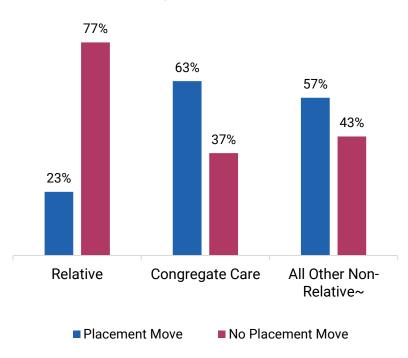

Where are children placed when they first enter OHC?

Total: 3,872

Black/African American and Hispanic/Latino children were less likely to be placed with a relative when entering OHC, with 63% of each group having initial placements with non-relatives.

Children's stability in OHC impacted by initial placement

When children are placed with their relative, they are less likely to experience subsequent placement moves. In 2022, children *initially* placed with a relative had an average of **0.4** placement moves while children placed with non-relatives had an average of **0.8** placement moves. Children initially placed in congregate care fare worse, with an average of **1** placement move. While this may seem small, remember every move a child makes in OHC is a change to their structure and routine. DCF is continuing to implement strategies to improve a child's stability in OHC.

^{*}Other placements include Institutions, Supervised Independent Living, and Missing from OHC placements.

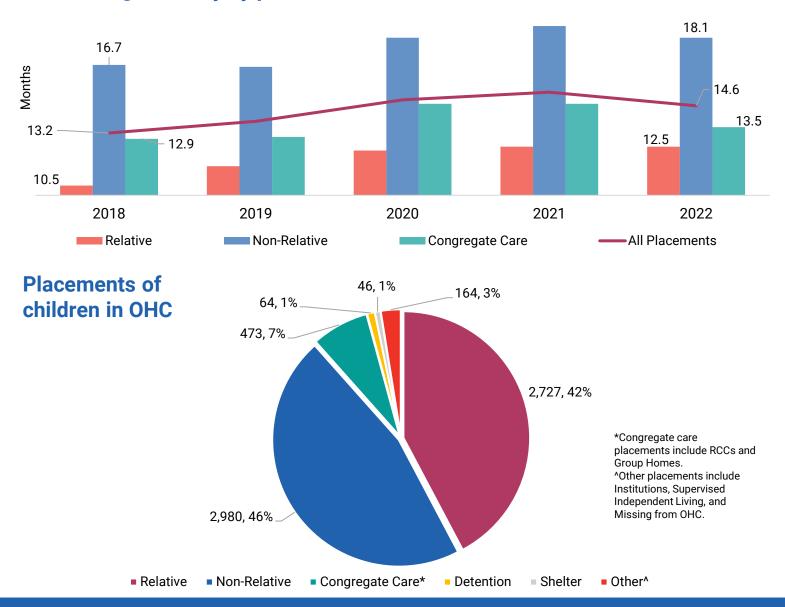

[^]Congregate care placements include RCCs and Group Homes. ~ All other non-relative placements include children in a non-relative foster home, detention, shelter, and other placements.

Relative Placement is Best for Children

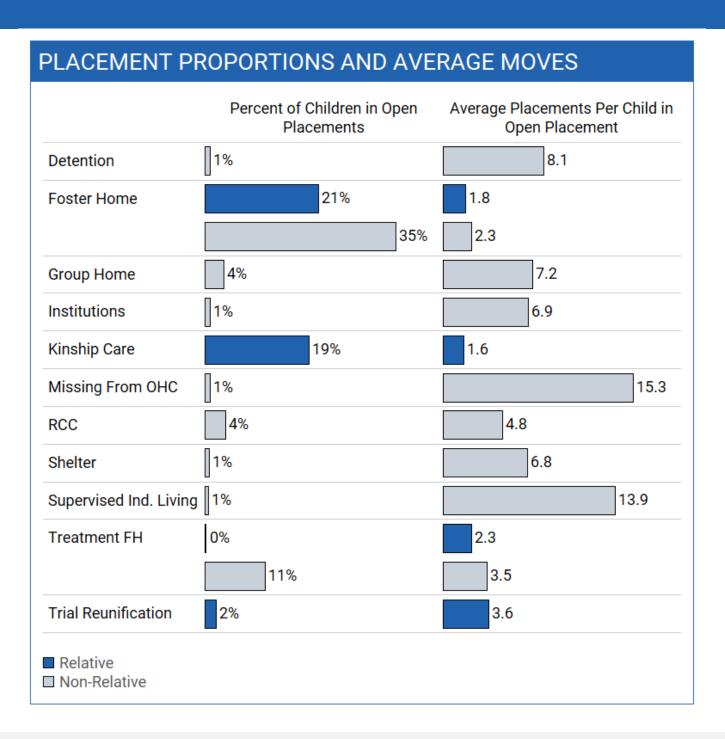

If a child needs to placed in OHC, placing children with a family member is preferred as it is the best way to maintain family connections.

On 12/31/2022, placements in family-like settings made up a majority of OHC placements (88%), 42% of children placed with relatives and 46% with non-relatives. Seven percent of children were placed in congregate care, which was a 25% decrease in congregate care placements since 2018. Statewide, children in OHC on this date were in OHC for a median of 14.6 months. Children placed with a relative were in OHC for a median of 12.5 months, compared to children placed with non-relatives at 13.5 and congregate care at 18.1.

Median length of stay by placement

Relative Placement is Best for Children

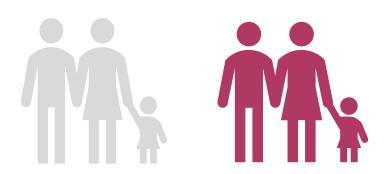

The benefits of placing children with a relative is prevalent throughout a child's experience in OHC. Children in relative settings experience fewer placement moves than children in non-relative settings. Of the children in OHC at the end of the year, those in relative foster homes experienced 1.8 placement moves in their current episode, compared to 4.8 in RCCs and 7.2 in group homes. When children were placed with relatives, they were more likely to return home to their family (61%) than when they were placed with a non-relative (49%).

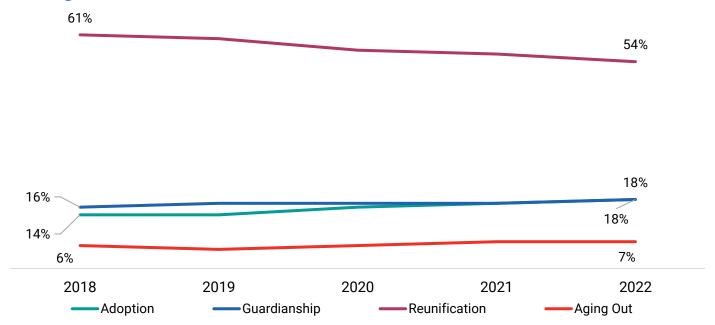

Supporting Children Leaving OHC

Returning children to their families and known communities is the most desirable outcome for children leaving OHC. In 2022, 90% of children who exited OHC achieved legal permanency. Over the past five years, while children who exited OHC due to adoption and guardianship slightly increased, reunification decreased.

About 50% of Wisconsin children in OHC return home to their family.

Discharges over time

49% of children exiting OHC were White, **29%** of children were Black/African American, **10%** of children were Hispanic/Latino, **9%** of children were Native American, and **1%** of children were Asian.

In 2022, 61% of the youth that aged out of OHC were in placements for over 2 years.

When reunification is not possible, adoption and guardianship are considered other options of legal permanency for the child. In 2022, 18% of children were adopted and 19% discharged to guardianship. Just 18% of adopted children were adopted by a relative.

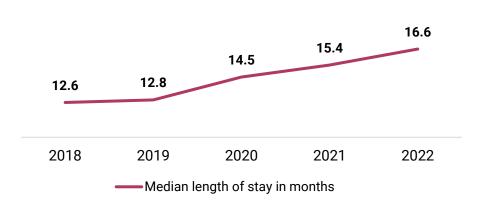

Supporting Children Leaving OHC

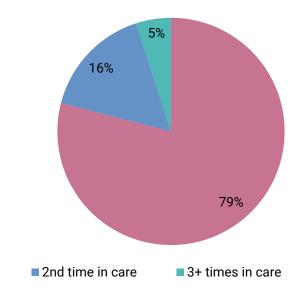

More children exited OHC (4,294) than entered (3,872) in 2022. This is a 4.5% increase of exits from 2021. Children have a better chance of thriving when they return to the safety and security of their life back with their families.

Length of stay in OHC has been increasing over the past five vears. In 2022, children who exited OHC spent a median of 16.6 months in OHC, while on average children spent 21.5 months in OHC. This means there are some children in OHC much longer than their peers. DCF has decreased the overall OHC population, and in doing so has also decreased children who stay in OHC for shorter lengths of time. This has impacted the overall median as there are more children in OHC staying for longer lengths of time.

How long do children stay in OHC?

Children returning to OHC

21% of children in OHC as of December 31, 2022, have been in OHC multiple times throughout their childhood. While the <u>federal standard</u> for re-entry rate is 8.3%, Wisconsin's re-entry rate was 10.5% for children who re-entered OHC within 12 months of returning home.

■ 1st time in care

Racial Disparity in OHC

DCF remains committed to using data to better understand racial disparity in our system. Data on disparity is used in evaluating programs and policies, utilizing and implementing program and policy initiatives to correct inequities and disproportionality for children and families of color in the child welfare system. The data supports that this commitment is critical as significant disproportionality persists throughout the OHC system for children and families of color. Though Wisconsin saw a 6% decrease in children in OHC compared to 2021, significant racial disparities persist for Black/African American and Native American children.

OHC Disparities in 2022

Black/African American children

- Black/African American children are consistently overrepresented by 30% in every facet of the child welfare system.
- Although more children have been leaving OHC, Black/African American children were the only group of children who exited OHC at a rate lower than the number of children that were in OHC. In 2022, while there were 33% Black/African American children in OHC, just 29% exited OHC.
- An overwhelming majority of children who went missing from a congregate care setting were **Black/African American girls (67%).**
- Black/African American children exiting OHC in 2022 had a median episode of 19.9 months, while all children had a median of 16.6 months.

Native American children

- Native American children's entry rate is **4x higher** and the OHC rate is **5x higher** than the Native American children living in the state.
- Nearly 30% of Native American children had prior experience in OHC.

Additional Disparity Data

- Of the youth in OHC at the end of 2022, 525 (8%) also had a youth justice referral in 2022. Of those, 49% were
 White children and 31% were Black/African American children.
- Though congregate care usage has decreased for all children compared to the prior year, when looking back five years, White children saw a 31% decrease, while Hispanic/Latino and Asian children saw an overall increase in congregate care settings.
- There was a 25% increase (17) of Asian children in OHC compared to the prior year.

Frequently Asked Data Points

A total of 10,452 children were served in OHC for CY 2022

Entry into OHC

Total entries in 2022: 3,872

to DHS/Other Institution: 16, (0.4%) | Death of Child: 7, (0.2%)

To compare data from prior years, please see the archived list of OHC Reports on the Child Welfare Reports and Dashboard page.

Appendix A

Out-of-Home Care Provider Types

In Wisconsin, there are a variety of placement settings which can be used to best meet the needs of a given child or youth. These settings are addressed in this report and include the following:

Foster Family Homes: Foster family homes can include both the home of a relative (e.g. voluntary, court-ordered or long-term kinship care) and unrelated individuals. Foster family homes are licensed by local child welfare agencies based on state statutes. Receiving homes are licensed foster homes that take children on emergency placements/short term placements.

Treatment Foster Homes: Treatment foster homes are licensed by child placing agencies, either through a county or a private agency. Private child placing agencies are licensed by Department of Children and Families (DCF). Treatment foster homes serve children with more intensive service needs that require specialized care.

Pre-Adoptive Homes: Pre-adoptive foster homes are licensed by a county or public adoptions. Children are placed in pre-adoptive homes with the intention of permanency being met by adoption in the near future. Adoptions occur with both relatives or non-relatives.

Group Homes: A group home is a facility operated by a person licensed by DCF to provide 24 hour care for 5-8 residents.

Residential Care Centers (RCCs): RCCs are residential facilities that are operated by local child welfare agencies licensed pursuant to section 48.60 of Wisconsin Statutes for the care and maintenance of children. Children placed in a RCC have significant needs that cannot be addressed in a family setting.

Shelter Care Facilities (SC): Shelter care facilities provide short-term (not to exceed a total of 60 days), non-secure residential care and physical custody to children pending court action or voluntary placements for under 20 days or crisis stabilization services for up to 5 days.

Detention: A detention facility under certain circumstances can be used as an out-of-home care placement when being used as or becomes a primary physical placement of the child.

Hospital/Mental Health Facility: Hospital/mental health facility could be used as an out-of-home care placement when the child subsequently enters into one of the placement settings listed above or when the hospital or inpatient facility placement takes place within a current placement episode.

Youth/Adult Correctional Facilities: Youth/adult correctional facilities are secured facilities operated by the Department of Corrections.

Note: This appendix counts the number of episodes a child entered and exited OHC in 2022. If a child entered and exited care more than once during 2022, they will be counted for each entry and exit.

Appendix I

ICWA and Native American Status

A child's and provider's Native American status is determined based on race, ethnicity, or ICWA status. Below are the eWiSACWIS documentation guidelines for ICWA and Native American status:

ICWA (Indian Child Welfare Act)

In eWiSACWIS, there are up to three Tribal Membership statuses documented for a child/provider. ICWA status for a child/provider is determined based on these statuses, as identified below –

- ICWA Child/Provider status is set to 'Yes', when the Tribal Membership status is any of the following -
 - (a) Member
 - (b) Eligible for membership, not a member
 - (c) Pending
- ICWA Child/Provider status is set to 'No', when any of the Tribal Membership status is 'Not eligible for membership'
- ICWA Child/Provider status is set to 'Unknown', when there is no information documented for a child for Tribal Membership status. In absence of any information, the status cannot be identified and is set to 'Unknown'.

Native American

In eWiSACWIS, there are up to five different races documented for a child. Native American status for a child/provider is determined based on race, ethnicity or ICWA status for a child/provider, as identified below –

Native American child/provider status is set to 'Yes', when any of the following is true -

- Child/Provider race is 'American Indian/Alaska Native' (across all five races) or
- Child/Provider ethnicity is 'Native American' or
- Child/Provider ICWA status is 'Yes'. (Refer to the explanation above on how to determine ICWA child)

Native American child/provider status is set to 'No', when child/provider's race, ethnicity and ICWA status do not match the required information as outlined above.

Appendix J

Key Definitions

Child: Term used to address both children and youth served by county child welfare agencies, county youth justice agencies, DMCPS, and public adoptions.

Discharge: A child's placement episode ends with the date a child is discharged from OHC. The discharge date represents the date the child achieves a permanent outcome, which is reunification, adoption, or guardianship.

Placement: The use of a facility or home provider for the physical placement of the child who has been removed from their family home.

Placement Episode: A placement episode starts with a child's removal from home and ends with a discharge from OHC to a permanent home or to independent living. A child may be placed in multiple placement settings within a placement episode.

Placement Settings: Child welfare agencies attempt to have a child stay in only one setting during their OHC episode. However, in some cases a child may be placed with multiple providers or in different placement facilities during a single placement episode. These changes may be due to actions initiated by the agency, the provider, the child, the parent, or the court. Placement settings include:

- Foster homes, including receiving homes, foster family homes of all levels and pre-adoptive foster homes
- Unlicensed relative and non-relative homes
- Group homes
- Residential care centers (RCCs)
- Court Ordered Kinship Care
- Shelter care
- Detention
- Trial reunification
- Supervised independent living
- Hospital/Mental Health facility
- Missing from OHC

A child or youth is considered Missing from OHC when they are under the placement and care responsibility of the department or a county agency, living in an OHC setting, and any of the following criteria are met:

- The child or youth has been missing for 8 hours or for a period of time that cannot reasonably be justified by the child or youth's age, maturity, or emotional capacity as well as documenting the child's or youth's missing episode in eWiSACWIS within 24 hours.
- When efforts to locate the child or youth have been unsuccessful.
- When it is known or suspected that a child or youth has been taken by force or coercion.
- When the child or youth is in the company of an unauthorized person or located in an unauthorized place.

Removal: A child's placement episode begins with the date of the child's removal from their home. The child is taken into physical custody and enters into OHC under a court order or via a formal voluntary placement agreement among the agency, the parents, and the placement provider. Information regarding the types of out-of-home care providers used can be found in Appendix B.

Use of Average vs. Median: The OHC report uses both calculations of average and median. While similar, each formula can provide a different perspective. An average provides a number that represents the entire dataset, including outliers. When outliers exist in a dataset, they can bring an average up or down. For example, if a child has been in OHC for many years, that long episode will make the average length of stay for the entire dataset longer. A median provides the value of the middle of the dataset. For example, if a majority of children in OHC are in placement for 13 months, the median would be 13 months, regardless of any outliers of children with particularly long episodes.
